

COLL-IN Collaboration Table Meeting and Breakout Sessions

Experience the future of meetings with the COLL-IN Collaboration Table. Gather your team around an interactive table to seamlessly open documents, browse websites, and display laptop screens - all simultaneously. This isn't science fiction; it's how COLL-IN enhances productivity and communication. Connect to a COLL-IN Stage or Solo for larger group sessions, boosting teamwork and showcasing your company's innovative edge over competitors. Impress clients and elevate your team's performance with COLL-IN.

Unplanned meetings, whether around the coffee table or in impromptu breakouts, are a reality. These spontaneous gatherings, often born from necessity when meeting rooms are unavailable, can be surprisingly productive. The informal setting can foster creativity and quicker decision-making, leading to efficient problem-solving and innovative solutions. Embracing these chance encounters can boost team cohesion and unlock unexpected breakthroughs.

COLL-IN Table's intuitive interface lets you easily log in, browse your media library, and begin incorporating slides, videos, and PDFs. Drag and drop these files onto the virtual table, just like you would physical printouts, making collaboration seamless and efficient. This intuitive design simplifies the process of sharing and manipulating digital content for productive meetings and presentations.

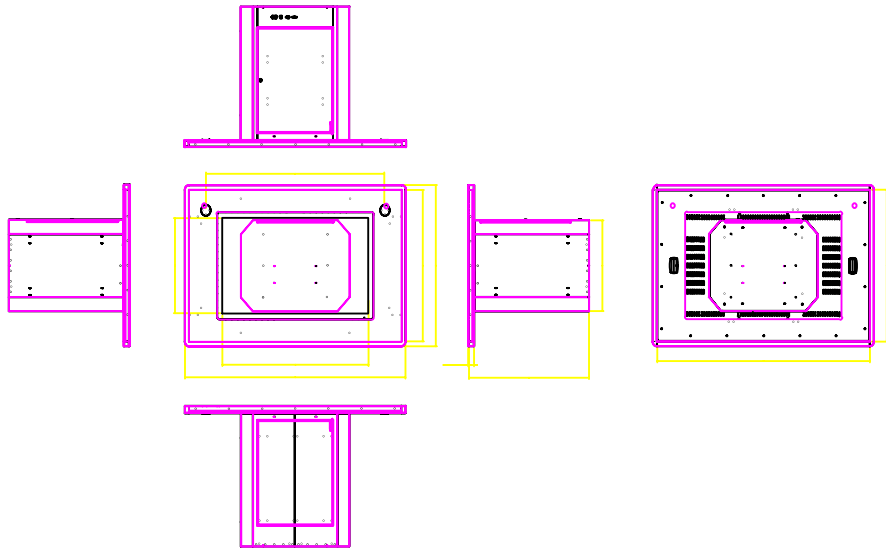

Seamlessly rotate your laptop to the table's far edge as one document is processed. This allows you to effortlessly access other files and share them with colleagues without crowding

or awkward maneuvering. The fluid movement minimizes disruption and maximizes workspace efficiency.

COLL-IN brings the power of collaboration to smaller meeting and breakout spaces. Enjoy the same impressive features as our larger systems, including seamless sharing of diverse media types – slides, videos, PDFs, and more – across the table. Interactive tools like annotation and sticky notes facilitate real-time discussion, while the option to mirror a connected laptop ensures everyone sees and interacts with content as needed. It's the perfect solution for focused, engaging group work.

COLL-IN's powerful features are optimized for collaborative table use. Multiple users can access and annotate the same document simultaneously, creating independent versions. This allows for real-time teamwork and individual contributions, all saved for later review and comparison. Enjoy seamless collaboration and enhanced productivity with COLL-IN's table-centric design.
